To whom it may concern:

It pains me to hear that a bill has been introduced that could take away a valuable service that I, as a long haul truck driver rely on. The idea that the NAB is trying to stop XM from broadcasting traffic and weather is, in my opinion a personal attack on my own freedom of choice. I use these traffic and weather reports to pick my routing from point a to point b. It is extremely valuable to me to know what is going on in a city several hundred miles away so I know in advance what I should expect. I obviously cant get local stations for a particular city when I am several hundred miles away. If this is allowed to happen it WILL affect the safety and proficiency of how I do my job.
